HD2 Call / Light Handset

The **new HD2 Handset** adds its name to the Intercall accessory list.

This unit features a new plastic moulding to match the same style moulding as the pear push lead. The brightly coloured HD2 has two clearly defined buttons, nurse call push with re assurance LED and a light control button.

The light button provides a momentary closing contact, which can be used to trigger an external device such as our Intercall LCU to switch room lights on and off. In order to operate the HD2 light control the call point's jack socket requires a stereo jack socket modification, the **L622HL, L722HL, L752HL, L762HL & SCP/HL** all have the suitable stereo fitting.
