

Bosch NurseCall

Efficiency and mobility

BOSCH
Invented for life

Bosch NurseCall –

A flexible, wireless call system

- ▶ Wireless NurseCall system means minimum installation effort
- ▶ Cost-effective solution for the modernising/ extending of existing call systems and for newly constructed buildings
- ▶ Can be easily extended at any time
- ▶ High reliability through periodic self tests

Wall transmitter

Pendant transmitter

Assistance at the push of a button

Rapid and efficient assistance gives residents of retirement homes, care homes and other assisted living facilities a feeling of safety and security.

To call for assistance, residents can push the emergency call button on their wrist transmitter or on the wall transmitter in their room. The message is transmitted directly to the nursing staff on duty.

Wireless technology improves efficiency

Wireless alarms guarantee a high level of safety for patients and takes the burden off nursing staff. In case of a call, the alarm is shown either on the display of the NurseCall system, a DECT telephone or a pager. The source of the call is indicated by floor, room and bed.

The wireless NurseCall system requires minimum installation effort. This is an advantage not only in newly constructed buildings, but also during the modernisation and extension of existing call systems.

Comprehensive communication system for total mobility

The dynamic, wireless NurseCall system consists of a wall transmitter for the resident or patient's room, portable transmitters (wristband or pendant) as well as a wireless pull cord, a push button and a wireless smoke detector.

Communication systems for call forwarding can easily be integrated into the call system. This gives nursing staff complete freedom of movement and enables them to make free internal phone calls. At the same time, they can easily determine the type and origin of the alarm from the large display of their wireless handset.

Emergency call systems for assisted living facilities

Elderly people often live independently in retirement homes close to residential or nursing homes. If required, they are able to access the social and care infrastructure of these institutions. The possibility of calling for emergency assistance is particularly important here.

Bosch carephones establish a hands-free connection via the telephone network to the residential or nursing home at the push of a button. The incoming emergency call is answered, enabling the relevant action to be taken immediately. NurseCall also offers a connection to a wander prevention system for persons suffering from dementia.

NurseCall Locator

A precise, wireless system to locate residents and patients

- ▶ Individual, flexible and discreet
- ▶ Portable wrist transmitter
- ▶ The new NurseCall Locator wireless solution can be installed anywhere

A Tradition of Quality and Innovation

For over 100 years, the Bosch name has stood for quality and reliability. Bosch is the global supplier of choice for innovative technology, backed by the highest standards for service and support.
